

LEXREG AFRICA

Brand Guidelines

Visual Identity & Design System

Version 1.0 | June 2026

Prepared by: Ian Love Mangirwa, Lead Developer

For: Mr. Charles, LexReg Africa Ltd

Status: Final

1. BRAND STORY & POSITIONING

LexReg Africa is the Governance, Compliance & Organisational Readiness Operating System for Kenyan businesses. We move organisations from fragmented compliance management — emails, filing cabinets, shared drives, individual devices — to a single source of truth for governance, compliance, and institutional memory.

Our brand communicates **trust, authority, and precision** through a visual language that draws from the world's most respected institutions: government services, financial institutions, and premium technology platforms. We are not a startup. We are infrastructure.

1.1 Brand Voice

Clear over clever. Every word must reduce ambiguity. If a user hesitates, we have failed. Our copy is direct, specific, and action-oriented. We avoid jargon unless it is the exact legal or regulatory term our user needs to hear.

Assured, not arrogant. We know Kenyan regulatory frameworks inside out, but we never talk down to our users. We guide. We clarify. We do not boast.

Warmth in structure. Compliance is cold. Our interface is not. We use human language, helpful animations, and clear visual hierarchy to make complex processes feel manageable.

2. LOGO & MARK

The LexReg Africa logo consists of a **Logomark** (the Africa continent with gold swoosh) and a **Wordmark** (LexReg Africa in SF Pro Display / Geist Sans). The mark may be used alone or with the wordmark.

2.1 Logomark Construction

The logomark is an SVG path depicting the African continent outline in Brand Navy, with a sweeping gold arc (the 'swoosh') crossing from upper-left to lower-right. The swoosh represents forward momentum, growth, and the connection between governance and prosperity. The continent outline grounds us in our geography and mission.

2.2 Clear Space & Minimum Size

Maintain clear space around the logo equal to the height of the 'LR' mark (approximately 28px at default size). The minimum digital size for the logomark is 20px. The minimum for the full wordmark combination is 80px wide. Never reproduce the logo smaller than these dimensions.

2.3 Color Variations

Variant	Usage	Navy	Gold
Primary	Light backgrounds, white surfaces, hero sections	#1A1A2E	#C9A227
Reverse	Dark backgrounds, navy cards, footer	#FFFFFF	#C9A227
Monochrome	Single-color printing, favicons, small icons	#1A1A2E	#1A1A2E

2.4 Prohibited Uses

Do not: distort the logo proportions, rotate or tilt the mark, add drop shadows or glows, place the logo on busy backgrounds without a clear container, change the colors outside the approved variations, or use the swoosh alone without the continent outline.

3. COLOR PALETTE

The LexReg Africa color system is built on two foundational hues — Brand Navy and Brand Gold — extended by an iOS 18 system color layer for UI surfaces, states, and semantic meaning.

3.1 Brand Colors

Swatch	Name	Hex	RGB	Usage
	Brand Navy	#1A1A2E	26, 26, 46	Primary identity, headings, primary buttons, dark surfaces, navbar
	Brand Gold	#C9A227	201, 162, 39	Accents, CTAs, highlights, progress indicators, decorative elements
	Gold Light	#E8C35A	232, 195, 90	Secondary gold accents, hover states, globe arc variations
	Gold Pale	#F5DFA0	245, 223, 160	Tertiary gold, background tints, subtle borders

3.2 iOS 18 System Colors

For UI surfaces, we adopt Apple's iOS 18 system color semantics. This ensures the platform feels native on iOS and polished on all devices.

Token	Hex / Value	Usage
System Background	#FFFFFF	Primary app background, cards, popovers
System Background 2	#F2F2F7	Grouped sections, auth layouts, onboarding background
System Label	rgba(0,0,0,1)	Primary text, headings, body copy
System Label 2	rgba(60,60,67,0.60)	Secondary text, subtitles, descriptions
System Label 3	rgba(60,60,67,0.30)	Tertiary text, placeholders, disabled states
System Separator	rgba(60,60,67,0.29)	Hairline dividers, input borders, list separators
System Fill	rgba(120,120,128,0.20)	Secondary button backgrounds, hover states
Destructive	#FF3B30	Error messages, delete actions, validation failures

4. TYPOGRAPHY

LexReg Africa uses a dual-font strategy: **Geist Sans** (primary) and **Geist Mono** (monospace) loaded via Next.js font optimization, with **SF Pro Display** and **SF Pro Text** as stylistic fallbacks for Apple-native aesthetic.

4.1 Font Stack

Display & Headings: SF Pro Display, Geist Sans, system-ui, -apple-system, sans-serif
Body & UI: SF Pro Text, Geist Sans, system-ui, sans-serif
Monospace (data, code, timestamps): Geist Mono, ui-monospace, monospace

4.2 iOS 18 Typography Scale

All typography follows Apple's Human Interface Guidelines for iOS 18, with exact letter-spacing values derived from SF Pro metrics. This scale is implemented as CSS utility classes.

Style	Size	Line Height	Weight	Letter Spacing	Usage
Display	34px	41px	700	-0.4px	Onboarding headlines, hero subheads
Title 1	28px	34px	700	-0.15px	Auth page titles, modal headers
Title 2	22px	28px	700	-0.35px	Section headings, card titles
Title 3	20px	25px	600	-0.45px	Subsection headings, insight titles
Headline	17px	22px	600	-0.41px	Button labels, form labels, nav items
Body	17px	22px	400	-0.41px	Primary body text, descriptions
Callout	16px	21px	400	-0.32px	Secondary body, onboarding descriptions
Subhead	15px	20px	400	-0.23px	Labels, metadata, captions
Footnote	13px	18px	400	-0.08px	Helper text, disclaimers, legal copy
Caption 1	12px	16px	400	0px	Badges, timestamps, small labels
Caption 2	11px	13px	400	0.066px	Micro-labels, data table headers

5. SPACING, RADIUS & LAYOUT

The layout system follows iOS 18 grouped-section conventions with a consistent spacing and border-radius scale. All values are expressed in CSS custom properties for maintainability.

5.1 Border Radius Scale

Token	Value	Usage
sm	6px	Small chips, badges, inline tags
md / base	10px	Inputs, small buttons, dropdowns
lg	16px	Grouped sections, cards, modals
xl	20px	Large cards, hero containers, onboarding panels
2xl	24px	Feature cards, bento grid items
full	9999px	Pills, buttons, avatars, status indicators

5.2 Grouped Section Pattern (iOS Settings Style)

For forms, settings, and data entry, use the iOS Grouped Section pattern: a white container with 16px border-radius, 0.5px hairline separators between rows, and 44px minimum row height. Each row has 16px horizontal padding and 12px gap between label and input.

Example: The login form uses an *ios-group* container with two *ios-group-row* elements (Email and Password), separated by a 0.5px solid `var(--system-sep)` border. The label is 88px wide with `text-ios-subhead` styling. The input is `flex-1` with transparent background, `text-ios-body`, and `caret-color: var(--brand-navy)`.

6. UI COMPONENT LIBRARY

The LexReg component library is built on shadcn/ui primitives with extensive custom styling and animation. Below are the signature components that define the product experience.

6.1 Buttons

Component	Description	Styling
ShimmerButton	Primary CTA with rotating conic-gradient shimmer. Used for all primary actions.	Navy background (#1A1A2E), gold shimmer (#C9A227), 2.5s duration, rounded-full
ShinyButton	Secondary accent with sweeping gold mask animation. Used for badges and subtle CTAs.	White/transparent background, gold mask sweep, rounded-lg, blur backdrop
Primary Button	Standard primary action in grouped forms.	Navy background, white text, rounded-2xl, 50px min-height, active:opacity-70
Secondary Button	Alternative action in grouped forms.	System fill-3 background, navy text, rounded-2xl, 50px min-height

6.2 Text Effects

KineticText: Per-character font-weight animation on hover (300 → 900) with stroke-width transition. Used for the hero headline 'Start strong. Stay compliant.'

TextReveal: Scroll-driven word-by-word opacity reveal over 200vh. The word color transitions from navy at 20% opacity to full navy as the user scrolls. Used for 'From idea to fully compliant entity.'

TextAnimate (blurInUp): Per-word blur-and-translate entrance animation with configurable delay, duration, and stagger. Used for section headings in Services, Globe, and Insights.

TypingAnimation: Character-by-character typewriter effect with blinking cursor. Used for the Services section headline 'Everything your business needs to stay compliant.'

6.3 Navigation

NotchNavbar: Fixed top navigation with a distinctive 'notch' silhouette created via SVG clip-path. Features frosted glass surfaces (backdrop-filter: blur(14px)), smooth-scroll anchor links, mobile hamburger menu with AnimatePresence dropdown, and ShimmerButton CTAs. The notch curves are drawn with SVG path strokes at 0.75px using rgba(0,0,0,0.06).

6.4 Backgrounds & Effects

CanvasFractalGrid: High-performance Canvas 2D background with animated dot grid, mouse-wave distortion, gradient animation, and noise overlay. Configurable: dotSize, dotSpacing,

dotOpacity, waveIntensity, waveRadius, dotColor, glowColor, and performance tier (low/medium/high based on FPS).

Cloudscape: Custom WebGL fragment shader using FBM (fractal Brownian motion) noise with 6 octaves, wind morphing, and three-color band mixing. Used as the hero section full-bleed background.

7. MOTION & ANIMATION PRINCIPLES

Motion in the LexReg interface serves three purposes: guide attention, confirm interaction, and create spatial memory. Every animation has a functional justification. Decorative motion is used sparingly and only on the landing page.

7.1 Easing Curves

The primary easing curve is **[0.16, 1, 0.3, 1]** — a custom cubic-bezier that produces a sharp acceleration followed by a gentle deceleration. This creates a 'premium snap' feel without being bouncy. It is used for all entrance animations, hover transitions, and layout changes.

For spring physics (card hover, stat card shuffle): **stiffness: 200, damping: 16** or **stiffness: 500, damping: 35** depending on the mass of the element being animated.

7.2 Timing Tokens

Duration	Usage
0.18s	Micro-interactions: menu toggle, icon swap, color fade
0.3s	Standard hover: button opacity, card scale, link color
0.5s	Entrance: eyebrow badge, small elements, stat cards
0.6–0.8s	Primary entrance: headlines, sections, bento cards
0.9s	Hero headline entrance: KineticText, display copy
1.2s	Ambient: globe auto-rotate, progress bar fill
2.5–3.5s	Continuous: shimmer sweep, bar chart oscillation, task carousel

7.3 Accessibility

All animations respect **prefers-reduced-motion**. The `useReducedMotion` hook from `Motion` (Framer Motion) is used to disable entrance animations, auto-rotate, and continuous loops for users who have opted for reduced motion in their system settings.

8. ICONOGRAPHY

LexReg Africa uses **Tabler Icons** as the primary icon library. Tabler provides a consistent, lightweight, and comprehensive set of outline icons that align with the iOS design aesthetic. All icons are rendered as SVG with stroke-width of 1.5px for standard usage and 2px for emphasis.

Color rules: Icons in navigation and secondary contexts use #737373 (system-label-2). Icons in primary actions or active states use #1A1A2E (brand-navy). Icons in gold-accent contexts use #C9A227. Icons in success states use #059669. Icons in destructive contexts use #FF3B30.

Size rules: Navigation icons: 16–20px. Form/section icons: 20–24px. Feature cards: 28px. Social icons: 15px. Status badges: 10–13px.

9. APPLICATION EXAMPLES

The following examples demonstrate correct brand application across key product surfaces.

9.1 Landing Page Hero

Background: Cloudscape WebGL shader (sky blue → white gradient) with full bleed.

Headline: KineticText, SF Pro Display, clamp(42px, 7vw, 68px), weight 300 (hover: 900), color #1A1A2E, letter-spacing -0.03em.

Subhead: SF Pro Text, 17px, weight 400, color #333333, max-width 440px, 17 words maximum.

Primary CTA: ShimmerButton, navy background (#1A1A2E), gold shimmer (#C9A227), 2.5s duration, text 'Get started', 15px font.

Secondary CTA: Frosted glass pill, rgba(255,255,255,0.68), backdrop-filter blur(12px), border 1px solid rgba(26,26,46,0.18), text 'How it works'.

9.2 Authentication Form

Layout: Centered on ios-bg (#F2F2F7) with 100dvh min-height.

Logo: LR mark in navy rounded square (40px) + 'LexReg' wordmark + 'Africa' subtitle.

Title: text-ios-title1, color var(--system-label).

Inputs: ios-group container with ios-group-row items, 88px label width, transparent input background, navy caret.

Primary button: Navy background, white text, rounded-2xl, 50px min-height.

Secondary button: System fill-3 background, navy text, rounded-2xl.

9.3 Insights Card (Featured)

Background: rgba(26, 26, 46, 0.90) with 1px border rgba(201, 162, 39, 0.18).

Corner radius: 20px.

Category badge: Rounded-full, background {color}18, text color matching category.

Headline: SF Pro Display, clamp(20px, 2.4vw, 28px), weight 700, white.

Summary: SF Pro Text, 14px, rgba(255,255,255,0.60).

CTA: Gold text (#C9A227), 14px, with arrow icon in gold circle background.

10. DO'S AND DON'TS

DO	DON'T
Use navy as the primary text and heading color on light backgrounds.	Use pure black (#000000) for text. It is too harsh against the iOS system colors.
Use gold sparingly — for CTAs, accents, progress indicators, and decorative highlights only.	Use gold for large background areas or primary text. It becomes visually overwhelming.
Maintain the iOS grouped-section pattern for all forms, settings, and data entry.	Use card-based form layouts with drop shadows. The iOS style uses hairlines and clear space.
Use the full typography scale with exact letter-spacing values.	Use generic font-size values without matching line-height and letter-spacing.
Use 16px border-radius for grouped sections and 10px for inputs.	Use arbitrary border-radius values that do not match the iOS scale.
Use 0.5px hairline borders for separators between grouped rows.	Use 1px solid borders for internal separators. They are too heavy.
Use Tabler Icons at 1.5px stroke-width for consistency.	Mix icon libraries or use filled icons alongside outline icons.
Respect prefers-reduced-motion for all animations.	Force animations on users who have opted for reduced motion.
Use the LR mark at minimum 20px and the full wordmark at minimum 80px wide.	Reproduce the logo smaller than the minimum sizes or distort its proportions.

11. CONCLUSION

The LexReg Africa brand is built on the principle of **institutional trust expressed through modern craft**. The Navy & Gold palette evokes authority and prestige. The iOS 18 design system ensures familiarity and usability. The custom animation layer adds personality without sacrificing performance or accessibility.

This guideline is a living document. As the product evolves, new components, patterns, and use cases will be documented here. All designers and developers working on LexReg Africa should treat this document as the single source of truth for visual and interaction decisions.
